

# The Naval Register: Support Software for Close Action

Twenty-first century support for eighteenth-century combat.™

Tired of staying up late the night before the game, busily shading in all those rigging boxes and computing gunnery numbers? Or perhaps you just don't play as much as you want to because of all the paperwork?

Never create another log form by hand...give your Close Action games the support they need with *The Naval Register: Support Software for Close Action*.

The image displays two overlapping screenshots of the software interface. The top screenshot shows a detailed ship log for the ship 'Poderoso' (Spanish, Rate 70). It includes sections for 'Ship's Infrastructure' (Rigging, Hull, Crew), 'Gunnery / Combat' (Long Guns, Medium Guns, Cartridges, BGN Modifiers, Range, BGN), 'Movement Plot / Crew Allocation', and 'Maneuver'. The bottom screenshot shows a similar log form with a red starburst overlay that says 'Two styles of customizable Ship Logs!'. The interface is filled with tables, grids, and various data fields for tracking game events.

*The Naval Register: Support Software for Close Action* is PC-based software that makes it easier to play Close Action...whenever you want to.

Here are just a few of the things it allows you to do:

- Automatically generate ship logs and GM summary sheets in seconds
- Sort and organize all of your scenarios by several different criteria
- Compose After Action Reports to document your battles
- View the entire ship database by their rate, or their nationality, or bring up a history report for a specific ship to see all of the battles it has been in.
- Mark a scenario to indicate that you have all the miniatures required to play it, or flag a scenario for attention so you can quickly find it later.
- Update your library of scenarios each time a new Close Action expansion is published and stay current with official scenario errata
- Design your own scenarios and print them on official log forms!

Order *The Naval Register* today, and complete ship logs for each ship in every scenario are just a few mouse clicks away!
